

ShoreStation® FlexPower Lifts

Don't just upgrade your boat lift. Get a ShoreStation FlexPower system and get the most out of your time at the lake!

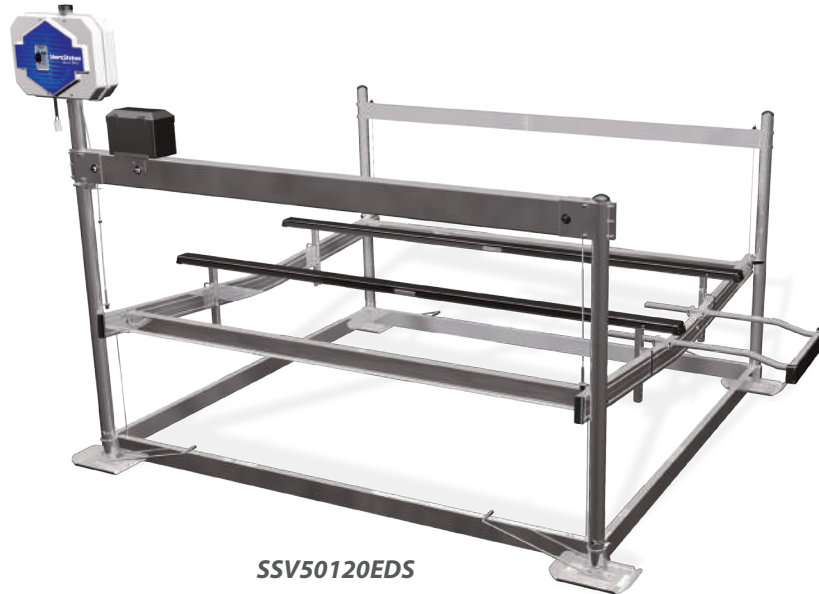

ShoreStation has heard you...

Today's boat lifts draw a lot of power to run reliably. We understand the frustration that comes with low voltage AC power supplies at the shoreline. Your stories resonate with us -- boat stranded in the lift or on the lake, nuisance GFCI tripping, or even worse an expensive lift motor replacement!

We at ShoreStation are dedicated to making your weekends on the lake relaxing, so we have developed the most reliable boat lift system on the market!

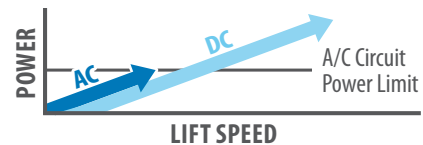

The ultimate boat lift...ShoreStation FlexPower! **More Reliability, More Speed, More Options**

ShoreStation FlexPower systems provide power source flexibility to ensure optimal boat lift performance time after time.

1 More Reliability – All you want to do is get your boat in and out of the water. FlexPower systems feature a simple design that is resilient in the marine environment. The battery simply acts as a buffer between the power supply and lift – eliminating issues with low voltage – ensuring years of trouble-free operation so you can relax and spend your time at the lake doing what you love!

2 More Speed – Reliable DC power delivers maximum and constant power to the motor resulting in a fast lift time. No more worrying about AC power supply limits or low voltage – our FlexPower lift will get you on and off the water in a hurry! Add the 24 volt system to your electric lift for even more speed.

3 More Options – Different users have different needs that's why we developed the FlexPower system; to allow you to choose the power source that best suits your lifestyle.

- **AC power** – Battery Tender charger, standard on all FlexPower systems, takes the hassle out of battery maintenance. Simply plug it in, connect to battery, and leave it! It quickly charges the battery using 110V power and then switches to maintenance mode to protect the battery and maintain a charge. You'll never have to worry about a dead battery - it's equivalent to never unplugging your cell phone.
- **Solar Power** – Go Green...recharge the lift battery with clean, free solar power. The optional speedy 20 watt charger features a solar regulator to prevent battery drain and protect your battery from the permanent damage caused by overcharging. Available for both 12V and 24V systems.
- **Boat Battery Power Cord** – Use the boat battery to “boost” the lift battery by simply plugging them together.
- **12V or 24V** – Choose the optional 24V battery tender or solar battery charging system for even faster electric lift times.
